## Cheltenham Borough Council – Waste Collection Round Design

**50000 properties, 100 waste collection rounds.....  
Add a new Organics Collection Round.**

### How would you do it?

Cheltenham Borough Council is a Waste Collection Authority serving 50 000 properties each week. The borough is based on the town of Cheltenham and is mainly urban with some areas of surrounding countryside.

Cheltenham Borough Council recently engaged Webaspx and Entec to redesign and rebalance their existing refuse and recycling rounds and to introduce over 20,000 new properties onto a new Organics collection round.

Webaspx used their specialist software tools and expertise, and worked closely with Cheltenham Borough Council to establish and meet specific local requirements. This allowed Cheltenham Borough Council to bring over 100 redesigned rounds on-line in a very short time scale.

The rounds moved directly from Design to Operation and were operating successfully within one month, with only a few areas requiring changes.

Vanessa Eagland, Waste and Cleansing Services Manager for Cheltenham Borough Council said of the project: "Overall this was a first class job given the tight deadlines. We were very pleased with the way Webaspx worked closely with us to design well balanced, workable rounds in such a short time-frame."
